

Integrated System Termographic Detection

Production Since 1958

COMPACT MODULE

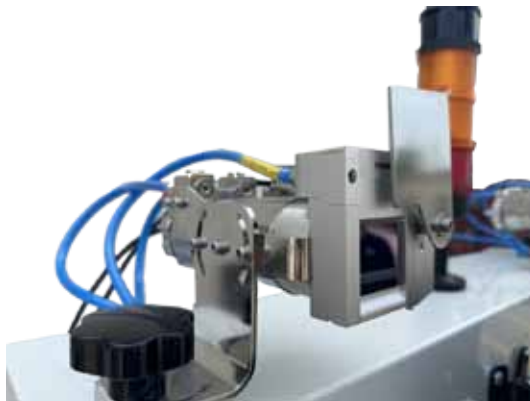

The entire system consists of a compact and easily transportable.

Including:

- No. 2 industrial thermal cameras
- Integrated computer and software of our own production
- Touchscreen monitor
- Siemens S7-1200 series PLC
- Industrial connector for interface with work cycle of the press
- Transducers for flow and temperature control of cooling water and protective air lens
- Industrial chiller for production of cooling water cooling water
- LTE modem and industrial router for remote assistance and cloud portal connectivity.

REINFORCED CHASSIS

THERMOCAMERA module completely protected by chassis steel chassis resistant to high temperatures. Liquid cooling circuit with control of return return temperatures.

Adjustable hooks for optimal framing.

LENS PROTECTION

Lens protected by silicon lens and air flow pressurised air flow. The lens is protected from smoke, dust and particles in suspended in the air, thus preventing any kind of error temperature readings.

TITOLO SEZIONE
